Portfolio

OBJECTIVE

Final-year Information Systems student at IMSIU seeking a Spring 2027 co-op in business analysis, bringing hands-on requirements, process-design, and delivery experience from four shipped products.

EXPERIENCE

Technical Lead (volunteer) — Sahifat Itma'inn ·
sahifh-newspaper.vercel.app

Riyadh (Remote) · Mar 2026 – Present · 6 mos

- Analyzed how a 34-member volunteer newsroom actually works, then redesigned its coordination as a 5-stage editorial process (writing, sharia review, proofreading, translation, design), replacing spreadsheets and chat groups.
- Translated business needs into discrete User Stories for a bilingual platform (35 screens, 16-table data model) and delivered it end to end using AI-assisted development (Next.js, Supabase).
- Defined the organization's roles-and-permissions policy, including how admin-created custom roles inherit safely from built-in ones.

AI Team Member — Enjaz Club, IMSIU

Sep 2025 – Present · 1 yr

- Core contributor to Eidaah, the club's AI study platform (see Projects); participate in frontend and backend code reviews.
- Previously Competitive Programming Team member (Aug 2024 – Sep 2025 · 1 yr 1 mo), solving algorithmic problems in Java; Certificate of Appreciation, 2024–25.

PROJECTS

Eidaah (إيضاح) — Arabic AI study platform · Enjaz Club AI Team project

eidaah-jgqp.vercel.app

- Defined and coordinated the team's task breakdown and testing cycles, and designed the content-governance process: students upload material, admins review it, and only approved files are published.
- Shaped the product decision that keeps AI cost flat as usage grows (each file is processed once at approval, then served from the database); designed the 13-table data model and contributed across frontend and backend (42 commits).

Masari (مساري) — graduation roadmap planner · team of 2

msari.vercel.app

- Owned the decision-support logic that turns degree requirements into valid term-by-term plans, including what-if scenarios: deferring courses, summer terms, and credit-hour caps.
- Designed Quality Assurance (QA) protocols and a data validator that cross-checks curriculum data against official university documents; it caught 4 errors in the university's own files.

Athar (أثر) — Arabic e-commerce storefront · course team project (sole developer)

athar-ochre.vercel.app

- Specified and built the full purchase journey: filterable catalogue, guest cart and checkout with shipping and promo rules, order tracking, and customer reviews (12 screens).
- Designed the guest-privacy policy: order data is publicly unreadable, and a receipt is released only to the holder of the order's private link or the matching order number and phone.

EDUCATION

B.Sc. Information Systems — Imam Muhammad ibn Saud Islamic University (IMSIU), Riyadh

Graduating Jun 2027

Certificates

ECBA — Entry Certificate in Business Analysis by **IIBA**

Expected Oct 2026

CAPM — Certified Associate in Project Management by **PMI**

Expected Dec 2026

SKILLS

Business analysis: requirements elicitation and analysis, process design, data modeling, content governance, stakeholder communication, documentation, decision support.

Programming: Java, Python, SQL, JavaScript, PHP, HTML/CSS.

Tools: AI-assisted development and design (Claude, Gemini) · Microsoft Power BI · Tableau · Git & GitHub · Odoo ERP · Microsoft Project · Microsoft Excel

LANGUAGES

Arabic (native) · English (intermediate)

INTERESTS

Horse riding · Running
